Materials

- **Realeather™
Jewelry:**

Three Strand Bangle Bracelet (J7060-01)

- 34 - 6mm sodalite gemstone beads
- 8 - 4mm clear glass beads
- 60" beading thread
- Beading needle-small enough to fit through your beads
- Scissors

Tips

- View photo for guidance on final result.
- Tighten as you go!

Instructions

Thread needle. Place the three strand bangle bracelet in flat on the table. Tie the loose end of the beading thread to the top strand of the bracelet, leaving a one inch tail. Loop the thread over the top strand, string one 4mm glass bead and hold in between strand one and two, string second glass bead and hold between strands two and three. Loop the thread around the bottom strand and back up through the second bead, under strand two and through the first bead and around the top strand, trapping the thread tail securing it along the top strand as you go. Come down from behind the top strand with the thread and thread a third glass bead, hold between strands one and two, thread a fourth glass bead and hold in between strands two and three and loop thread around the bottom strand and then back up through fourth bead, under strand two and back through third bead. Continue these steps using the 6mm sodalite beads, weaving the thread through the beads and around the strands of the bracelet, being careful to tighten as you go. After four 4mm beads and thirty-four 6 mm beads are in place, finish with four more 4mm beads. Tie the thread around the top strand several times passing the needle through to secure. Pass needle back through threads around the top strand to secure tail. Clip thread.
